Railway Construction in the West

Only a few years ago there was a feeling throughout Canada that the construction of railways in the Dominion had been rather overdone. This opinion was freely stated by many men in public life, by bank presidents and financiers, and found expression in newspapers all over the country. The statement was frequently made that Canada had built railways fifty years in advance of the time when they would be needed and the population and productive capacity of the country warranted. The greatest financial danger confronting the Dominion, it was alleged, was its heavy commitments on account of railways.

The fact that Canada possesses the greatest railway mileage per capita of any country in the world, and the further fact that a few years ago during the war the Canadian Northern, Grand Trunk and Grand Trunk Pacific Railways got into financial difficulties and had to be taken over by the Dominion Government, and that for some years following during the post-war depression the Canadian National was operated at a heavy financial loss, no doubt accounts for these rather pessimistic views. An entirely different opinion exists today.

When the C.P.R. was first projected the same false-hearted views prevailed. The idea of a transcontinental railway across Canada from the Atlantic to the Pacific, crossing thousands of miles of undeveloped prairie land and over the Rocky Mountains, was ridiculed in the English press as the dream of madmen, and even in Canada it was predicted that such a railway would never cost the cost of its own construction. The world realized today how false all these dire predictions have proven to be.

The opinions expressed only a few years ago during the anxious days of the war and the world depression which followed are proving to be equally erroneous.

In a most instructive address before the Canadian Club at Regina recently, Mr. Cyril Young, Minister of Development, Department of the Canadian National Railways, stated that for hundreds of miles along the main line of the new transcontinental, through the clay belt of Ontario, the railway was earning an operating surplus, while bringing about settlement and building up important industries, giving to Canada what heretofore it has lacked, depth in addition to its immense width.

In the past, Canada has boasted of its boundaries resting upon two oceans, east and west. Now, with the rapid pushing forward of the Hudson Bay Railway, Canada looks forward with eager anticipation and confidence to the day not far distant when its commerce will likewise pass through a third ocean on the north. And even before that railway is completed to the north, a branch line is being rushed to completion in order to handle the enormous traffic which will result from the development of the Flin Flon and other mining areas of the north which, it is predicted, will rival the richest mineral areas in the known world.

Today, instead of believing that railway construction has been overdone in Canada, the two great railway systems of the Dominion are steadily increasing their construction programmes. Last year Parliament authorized an extensive branch line construction programme for the Canadian National, largely in Western Canada, and providing for the building within three years of some hundreds of miles of new lines. That work, which was started last year, is to be pushed with vigor during 1923.

Nor does the C.P.R. lag behind. The annual report of that Company, issued last month, reveals the fact that during 1922 no less than 200 miles of new branch lines were graded and track laid on 170 miles, while for the year 1923 the directors recommend the building of no less than eleven extensions in the provinces of Alberta and Saskatchewan involving the construction of no additional 247 miles of new lines.

Not to be outdone by the West, the Ontario Government is steadily pushing its system northward towards Hudson Bay, while branch feeders are spreading out into districts where settling developments are taking place.

The Government at Ottawa is confronted with applications for new railway charters for lines in northern Saskatchewan, Alberta and British Columbia aggregating thousands of miles with a view to providing for the opening up and development of the north country and the creation of new out-lets to the Pacific.

These are the answers now being given to those who predicted disaster for Canada on account of its railway construction of a few short years ago. Take Saskatchewan as an example. Youngest among the provinces it already enjoys a railway mileage second only to that of Ontario, and during this year of 1923 work will be in progress upon approximately 300 miles of new branch lines, not including the Hudson Bay Railway and the Flin Flon branch, both of which will directly serve the Province.

And as if to provide the final answer to the false-hearted of a few years ago, the Canadian National has turned its operating deficits into substantial operating surpluses, surpluses sufficiently large to meet all the interest payments on bonds and debentures held by the public, while the encouragement given to settlement and industrial development all over the country; the Federal Government is receiving a substantial, albeit indirect, return for the money Canada has invested in this system.

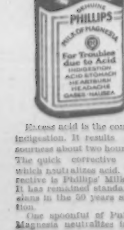

Railway development, past, present, and future, is the foundation upon which Canadians are erecting a secure, prosperous, and ultimately self-contained nation, a nation that is destined to occupy a place in the very front rank of world powers.

The first human deposit of helium gas in Europe has been found at Hunsicker, Baden in Germany, 500 meters under surface.

Western Canada Livestock Union

Annual Convention For 1923 Will Be Held At Edmonton

The 1923 annual convention of the Western Canada Livestock Union, will be held in Edmonton, it was decided at the recent session of this organization, which was held in Vancouver. R. A. Wright, of Drinker, president of the organization for the coming year, J. L. Walters, of Oliver, is the provincial vice-president for Alberta, Chief Officer, of Montreal, occupies the same position for Saskatchewan, and George Gordon, of Oak Lake, for Manitoba, C. C. Thompson, of Regina, continues as secretary of the Union for 1923.

A SPRING TONIC AN AID TO HEALTH

You Can Lay the Foundation Of Good Health Now By Building Up Your Blood and Strengthening Your Nerves Through the Use Of Dr. Williams' Pink Pills.

The good old fashion of taking a tonic in the Springtime is becoming the custom of our grandparents, and the young men and children go through the ritual on reserve strongly held, and languid as the spring days approach. A tonic for the blood and nerves at this time will do much for each people, by putting color in the cheeks and building that tired feeling that worries thousands of people at this season of the year.

It is impossible to be energetic if you are ailing. If you are weak, or if your nerves are frayed or shattered, you cannot compete with others if you do not get refreshing sleep at night, or if your appetite is poor or you are losing weight. You need a tonic at this time to add to your efficiency now, as well as to save you from suffering later on. And in all cases, a tonic is needed to get you on your feet.

Large Population For Canada Is Foreseen

Dean of R.C. University Also Predicts Staggering Growth

In Industry

"Dipping into the future of Canada, Dean H. Brock, of the faculty of applied sciences, University of British Columbia, before the Canadian Club at Kamloops, forecast a population in the Dominion of 200,000,000 and a stupendous growth in industry and foreign trade never before seen in the history of the world. Dean Brock based his assumptions on analysis of existing conditions in Europe, in relation to temperature, rainfall, coal, resources and elevation.

From these ratios could be established the potential population and Canada's could be estimated comparatively as above. This took no heed of the vast northern empire.

A population of 20,000,000 was forecast by the dean for southern British Columbia within a generation or two.

In the last one hundred years the population of the world had increased two and one half times and Europe was near the saturation point. Countries having similar meteorological conditions and still open to continental trade were Canada, South Africa, South America and Australia. Of these Canada had the greatest advantages, being nearest to Europe, a location in the northern hemisphere and possessing ample resources.

On wet, slippery streets and highways—around sharp turns—measuring in and out of traffic—stepping suddenly—you can always depend on the powerful Firestone non-skid tread to hold without slip or slide.

Supporting this safety tread is the special Gum-Dipped cord, built of cords dipped in a rubber solution which saturates and insures every fibre of every cord with rubber. This maintains the friction and heat of light duty service, and strengthens the whole structure of the tire to withstand heavy loads.

Your best Firestone Dealer will serve you better and save you money.

Saskatoon Winter Fair Successful

Exhibits From Western Canada and Ontario Competed For Premier Honors

"The biggest and best fair yet held," aptly describes the recent Saskatoon winter fair held at the Saskatoon March 20-23. Accommodated for the livestock classes provided centrally inadequate to the needs of the extended lists of entries in the horse and cattle departments, and four additional barns in the city had to be requisitioned to house the surplus stock. Exhibits from the three Western provinces and Ontario, together with recent importations from Great Britain and Europe competed for premier honors in many of the events and the judges were faced by some very strong classes in both horse and cattle sections. Dr. Wright, Dr. Walker, Dr. H. J. Harkin, placed the laurels in the cattle classes. Dr. Reid, of Canada, Dr. Reid, of the Percherons, and Belgians, and Albert N. of the Percherons, Quebec, officiated in the Clydesdale section.

Joe Finlayson, of Brandon, Man., and C. M. Bear, of Regina, Sask., were prominent winners in the stallion classes, the former with his imported Clydesdale, and the latter with Percheron and Belgians. Female classes were chiefly represented by entries from Lethbridge, Conquest, Falconer, Ontario, and the Crues, of Saskatoon, Leslie and Davidson, Watrous, Morris and Robertson, Zerkow, and Dr. Harkin, of Watrous. From Young, were prominent winners in the Clydesdale commercial section.

The grand champion steer of the show was found in Victor Glenacres, owned by John Brown, of Brandon, Man. Earl Brown, also of Brandon, secured first place in the boys and girls calf class with Nigger boy. Both these calves were of Angus breeding. A thoroughbred Angus steer which occasioned considerable interest was "Wes White," exhibited by the University of Saskatchewan. This steer while weighing almost 2,000 pounds at 2 years and 9 months of age, was still in the best of condition.

Concluding the fair with a successful sale of fat stock which the top calf offered by Earl Brown brought 25 cents per pound, the management expressed their high estimation of the splendid progress that has attended this annual show. Twelve executive managers, Mr. W. J. John, and to the President, Mr. A. Wilson, the increasing support of exhibitors generally, is particularly gratifying. New accommodations will have to be secured before another year as the present show building—an old Canadian National rooming house—is to be sold and removed from the premises. A permanent area is the objective of the management and will be judged by the magnitude and the success of the fair just held, nothing short of this will adequately serve the need of Northern Saskatchewan's annual winter fair.

Sheep For Manitoba

Plan To Place 100,000 Sheep Annually On Manitoba Farms

A movement is under way for the placing of 100,000 sheep annually on Manitoba farms. These will be sold in groups of fifty to each farmer, somewhat similar to the plan now in operation in North Dakota. At a conference of members of the Sheep Breeders' Association, Manitoba representatives and members of the Winnipeg and Brandon boards of trade, J. D. McCreigh was appointed temporary chairman a committee to make further arrangements for the carrying out of the plan.

Mrs. Hesp—"Don't take it to heart. In a month he'll be back again."

Mrs. Hoop—"That's just it. I thought the judge would make it a mistake."

Arctostaphylos and distantes are judged by the excellence of their extraction—

"Speaking to my wife I used a word which no offended her that she had not spoken to me since."

"I should be obliged if you would tell me what the word was"—Paris Mail, Paris.

W. N. N. 1728

Used Wrong Metaphor

Lloyd George Credited With Making Ship That Turned the Tables. And, speaking of the use of words, Mr. Lloyd George's undoubted fluency has just been turned against him in an ingenious manner. There was a by-election in the north the other day. "L.L.G." intervened in the campaign, and the Liberal candidate won. The Liberal leader forthwith declared that the Tory party was "like a polar bear drifting north on an iceberg." And, pleased with his nautical metaphor he went on to declare that the defeated Conservative candidate had been "shanghaied."

Whereupon the defeated Conservative produced a dictionary in support of his contention that he who is shanghaied is "the victim of a very unusual outrage."—London Correspondent, New York Herald.

Name Hotel After Famous Wheat

Hotel Marquis To Be Erected In Lethbridge As a Community Enterprise

The new hotel which is being built in Lethbridge as a community enterprise, is to be known as the Hotel Marquis, to commemorate the famous spring wheat of that name. Marquis wheat was originated at the Canadian Government Central Experimental Farm, Ottawa, several years ago. Its introduction is regarded as the most important event in Canadian agriculture. About 90 per cent of the spring wheat grown in Canada and 60 per cent, grown in the United States is of the Marquis variety. Marquis wheat has won more world championships at the International Grain and Hay Show at Chicago than any other variety.

Canadian Tree Species

In Canada there are approximately 150 different species and varieties of plants reaching tree size. Only 31 of these are coniferous, but the wood of these forms 90 per cent of our forest products, and the trees themselves cover over a larger proportion of our potential area.

"Is this the road to Redville?"

"Yes," drawled the farmer. "It's if you're inclined to circle the globe. If you turn around it's 21,998 miles near."

Madagascar's surplus crocodiles are to be skinned for bookbinding and shoe leather. Their fat is to be used in the treatment of rheumatism and other diseases.

Red Fife Wheat

Was the Standard Spring Wheat Variety In Western Canada For Years

The first notable variety of wheat to be introduced into Western Canada was one which had been developed more or less fortuitously, by a farmer named David Fife, of Fifeville, Ontario, after whom the wheat came to be named. This variety, unfortunately for Canada, proved to be a wheat of very high milling and baking quality as well as a good yielder. From the year of its introduction into Western Canada (about 1883) until the appearance of the world-famous Marquis, some twenty-six years later, Red Fife was the leading, and, in fact, the standard spring wheat variety of Western as well as Eastern Canada. It was this variety which came to be known as the basis upon which Canadian official and commercial grades of wheat were established. Thus, the original grades required that, in each case, there must be a certain minimum per cent of Red Fife present. It is of further interest to note that practically all the leading spring wheat varieties in Canada today are more or less closely related to Red Fife.

While the introduction of the Red Fife variety into Western Canada constituted an epoch-making event, yet this variety possessed certain serious defects. It was a wheat of low yield, especially in its tendency to mature, were quickly recognized by Dr. Williams Henshaw, who became the first Director of the Canadian Government Experimental Farm System. He realized that if these great plains of the Canadian West, just then opening up to extensive exploitation, were ever to attain a position of prominence as a wheat producing country, an earlier maturing variety than Red Fife must be employed.

What Interested Him

Hobbs didn't show much interest in the newly arrived baby, and the young wife was disturbed. She overjoyed one night to discover him standing over the baby's cot.

"A penny for your thoughts," she said, teasingly.

Startled, he blurted out: "For the life of me I can't see how anybody can make a cot like that for \$1.50."

Col. Lindbergh is said to long for a double to do his talking for him. This is the first hint that the famous young man is contemplating matrimony.

C.P.R. Seed Train Tours West

The Canadian Pacific Railway is sponsoring a seed train tour of the West. The train will consist of two passenger cars carrying a number of seed cleaning machines and others to be used in demonstrating seed and manure treatment. Dairymen will also be featured through the tour, lectures in this connection being given by R. B. Hogg, government dairy promoter.

In the towns already visited, the train has been greeted with enthusiasm by the farmers displaying an eagerness which speaks highly of the reputation of the seed and forage crop demonstrators. It is expected that the tour will be a success.

With a view to further promoting the best use of seeds and obtaining first-class results in raising stock, the Canadian Pacific Railway has again placed a touring demonstration train on their lines, which visits all important farming centres in the West, Prairie Provinces and part of the West.

The train will take service at the latter end of last month, the opening being attended by a representative gathering of government officials and members of the Saskatchewan Wheat Producers. The value of such a train was stressed by the Hon. C. M. Hays.

These beautiful first-class cars are used by the Canadian Pacific for the purpose of carrying seed and forage crops. The train will consist of two passenger cars carrying a number of seed cleaning machines and others to be used in demonstrating seed and manure treatment. Dairymen will also be featured through the tour, lectures in this connection being given by R. B. Hogg, government dairy promoter.

These beautiful first-class cars are used by the Canadian Pacific for the purpose of carrying seed and forage crops. The train will consist of two passenger cars carrying a number of seed cleaning machines and others to be used in demonstrating seed and manure treatment. Dairymen will also be featured through the tour, lectures in this connection being given by R. B. Hogg, government dairy promoter.

Television In The Home

Should Be Possible Within A Year Or Two

The New York Times quotes an unnamed representative of the Radio Corporation of America as predicting that one year ought to see television in the home.

The invention of television, the newspaper says, causes observers in the radio to give credence to the rumors of the acquisition of the Victor Talking Machine Company by the Radio Corporation. The observers and radio engineers say that television and picture radio require a motor to revolve a disc or cylinder synchronized with similar apparatus at the transmitting end and that it is logical that the photograph and radio should be one complete instrument.

Methodical As To Tips

New York Waiters Know What To Expect From Regular Customers

New Yorkers became accustomed to leaving the same amount of money in tips when they dine at hotel restaurants. For luncheon some leave a quarter, and for dinner they give a half-dollar. Waiters know just what to expect when they are various parties enter the dining rooms and take their favorite tables.

The other day a regular patron of Bretton Hall restaurant stumbled through his change trying to figure out how much to tip. The test he could give up was two dimes, three pennies and a 2-cent coin. And that's what the waiter found when he cleared away the dishes.

What Causes A Cold

After eleven years' study, Dr. Volney R. Cheney, medical director of a large Chicago packing firm, declares that colds are not infectious at all, but are caused by overeating, lack of exercise, loss of sleep and mental strain.

Lead Mining In Yukon

In 1920 the Yukon produced about 2,300 tons of lead or about 2 per cent of the total Canadian production. The bulk of the lead is mined in the form of silver lead and concentrates from the Mayo District.

George: "Yes, he was bitten by his own dog."

William: "Was he now? How was that?"

George: "He forgot himself and spoke to the dog like what he do to his wife."

Starting A Strawberry Plantation

Strawberries Will Thrive On A Great Variety Of Soils

Strawberry plants will not stand being covered with water in early spring or during the late winter, therefore good surface drainage is absolutely necessary. A gentle slope is the best place on which to plant. The strawberry will thrive on a great variety of soils, from a very light sand to heavy clay, but, according to a Dominion Department of Agriculture bulletin on the "Cultivation of the Strawberry," it is best to select a moderately light friable soil. A soil that does not pack or bake is to be preferred as it is important to get the young runner-plants rooted as early as possible. Land under cultivation should be used for a new strawberry plantation, as land which has been in use for some time is liable to be infested with white grub. Land infested with such grubs or other pests should be avoided. A thorough ploughing, disking, harrowing and rolling is necessary before planting. The bulletin, which covers the whole subject of strawberry growing, may be obtained from the Publication Branch, Department of Agriculture, Ottawa.

Good Memory Test

We were struck the other day by the fact that the President of the Fiume's Federation of France was at a dinner in Paris the other day and offered to give a second toast to the whole company if even three of the guests could tell him the position of the fire alarm nearest his own house. It was found that not one of them could. How does that apply to our readers? Do they know where the fire alarm is? Also do they know the number to phone in case of a fire? Try it first on yourself and then on your friends.

Her Instructions

A young woman was seemed to be having her first experience in a bank approached the window of a paying teller and gave him a large check which she wanted to cash.

"How much will the money?" the teller inquired.

"Oh," replied the young woman, in some confusion, "I'll just hold out my hand and you can put the money in it."

The teller and the housewife are the only domestic insects in the world.

IS WEIGHT LESS AFTER SLEEP?

Experiment Made By Lawyer Is Not Conclusive Proof

A certain observer says men lose weight while he sleeps. The proposition that the body loses weight during sleep is not in accordance with the views of stock men. Farmers, when fattening hogs, try to keep them sleeping about two-thirds of the time. Chicken fatteners keep their fowls in darkened rooms. They plan to have them sleep all the time except for short feeding periods. But experience seems to teach that animals tend to put on weight while sleeping. Then let us see what is the evidence to the contrary.

A lawyer with considerable training as an engineer kept a very careful detailed record of himself for several years, or rather, during the course of several years he kept records for several periods of several months each. He was equipped with accurate scales. He weighed himself every day and entered his weights in the record. He made detailed records of everything he did or ate or drank, and of his environment. All of this record was plotted on charts. One weighing was just before going to sleep and another was just before getting up. Without exception he weighed less after sleeping than he did when he went to bed. Does this mean that sleeping causes loss of weight?

While sleeping nothing went into his body except air, and he breathed out his body weight. He weighed less after sleeping than he did when he went to bed. Does this mean that sleeping causes loss of weight?

Had this man weighed and analyzed the air he expired, and especially had he determined how much oxygen he had inhaled, and had he collected and weighed the perspiration he excreted he would have accounted for all his loss of weight. He was sleeping in bed. In all probability he slept in air that was far too dry. His body, through breath and sweat, had the job of moistening the air of his room. Carrying out this job was responsible for the loss of weight.

This observation opens up a line of thought. Would there have been less weight had this gentleman been sleeping in a greenhouse, where the humidity was constantly over 70?

Honor Heroic "Mounties"

Names Being Given To Stations On Hudson's Bay Railway

A prophet may be without honor in his own country, but it is different with the hero.

The foundations of Canada's North and West were laid with heroism and Canada does not forget her pioneers. The greatest pillars have stood at the base of a figure of romance in Canadian history, and it was a typically Canadian gesture when it came to the naming of stations along the Hudson's Bay Railway, two "mounties" who 40 years ago died heroically, should be remembered.

The point which has hitherto been known as mile 178.6 will be known in future as Harkin, and further along the line is a place called White.

Corporal C. H. Harkin was killed in 1887 by the Indians. Alighting Voles, and Sergeant W. B. White was killed by another Indian, Charon, the year previous. The names of these two men, trying to maintain the law, and in honoring them Canada honors itself.

In the revision of station names along the Hudson's Bay Railway, a number of other men whose lives have not been so peaceful as Harkin's have worked in their way for the opening of the new country are commemorated.

These names are: Harkin, Alighting Voles, and Sergeant W. B. White, former mayor of Winnipeg, and there is a point bearing the name of General Palmer president of the Canadian National Association, both of whom have been unrelenting in their efforts to bring the North to its own. The names of J. A. Campbell, former M.P. for the Prairies, and Harkin are named after the present minister.

Theatre For Passion Play

New Building In Bavaria Will Be Ready For Next Performance

A theatre built of stone and with a stage of 4,000 sq. ft. will be ready to displace the present wooden structure at Oberammergau, Bavaria, where the Passion Play is held every ten years. Whether the next series of performances will be held in 1930 or 1932 is not definitely settled, but the new structure will be opened whenever they are held.

A new building for dressing rooms for the 100 players in the drama will also be erected.

The total cost is estimated at \$72,000. A loan will be necessary to get funds for the construction of the two buildings.

What the tradition of having the stage in the open will be abandoned in the new plans has not been decided.

Agricultural Canada

Agriculture Holds Leading Place In Trade Of The Dominion

The importance of Canada as an agricultural country is emphasized in the trade report for 1921. In agricultural, vegetable and animal products are credited with \$71,154,120. Next comes wool and paper valued at \$28,704,981. Among the principal items of imports agricultural, vegetable and animal products total \$27,513,594 in value, with iron and its products in second place, valued at \$24,163,285. Canada's principal foreign trade is done with 28 countries.

Look Three Of Them

At the ship's concert on an ocean liner a collection was taken up for the Bazaar of Paris. It totalled \$400.03, and the chairman, amused at the three odd cents, suggested that perhaps there was a bookman on board. "Book man," piped up a voice from the Highlands, "there are three of us!"

A woman may pretend to be convinced against her will, but she never is.

There'll be no one in heaven better than the average man imagines he is.

"At luncheon and a friendless have been acquitted. Who ought to be condemned, then?"

"The jury," J. L. Travass, Rome.

Mr. and Mrs. U.S. Grant, of Yellow Grove, spent yesterday in town visiting Mr. and Mrs. W. J. Fairbairn.

Look on the Golden Memorial Ladies' Aid adv. reporting the annual sale of work to be held in the church on Saturday, May 12.

Box and Cox, a comic sketch, followed by a concert and social evening, will be given in the church on Tuesday evening, May 10th. Come and have a good evening's entertainment.

Mrs. Nelson, of Edmonton, President of the school Assembly, and Mrs. E. Cope, of Medicine Hat, Past President, and Mrs. Nuxworthy, District Deputy Pres., were the guests of Mrs. A. J. Learmonth Monday.

Arrangements are under way for Mothers' Day service in Golden Memorial church on Sunday morning May 13th. It is hoped the program this year will be better and the attendance bigger than any preceding Mothers' Day.

Anything You Value

Things you value should be protected. Few homes have protection for important papers and securities. A Safety Deposit Box in the Bank may be secured for a very small annual rental. A Safety Deposit Box is your protection.
